

AUDIO PLUS TO EXHIBIT 3 NEW MODELS FROM STUDIOMASTER

Audio Plus, one of the foremost distributors of professional audio products in India will exhibit amongst other products three new models from Studiomaster at their booth **(D29, Hall 1)**. These include the SMB 1250, Fire 92 and TWF 2115.

SMB 1250:

A premium-quality 12" 500W @8Ω mid-bass transducer, the SMB 1250 has been designed for maximum efficiency and performance in the 50Hz to 3500Hz operating range. The

mid-bass transducer has sensitivity of 97dB which is critical for transducers in this segment. The high-grade inside/outside wound 4" copper voice ensures maximum power, efficient performance and superb tone. The SMB 1250 has been optimized to reproduce critical mid band range robustly. This ensures the speaker has

great sounding tonal qualities. The 500W @8Ω output making usable for variety of enclosure designs.

The SMB 1250 is the newest member of the ever-expanding S-Series transducers from Studiomaster Professional. The S-Series already offers a wide range of transducers starting from 21" LF transducers to precision HF transducers that cover the whole audio spectrum. The SMB 1250 offers amazing cost-effectiveness without any compromise in quality. All of this is backed by brand Studiomaster Professionals impeccable track record, stellar performance and reliable after sales service.

Fire 92:

Studiomaster Professional's Fire series of speakers have been setting the Indian pro-audio market ablaze with its impeccable sonic capabilities and cost-effectiveness. The home-grown pro-audio is all set to start shipping the latest member of the Fire series speaker family, the Fire 92 Line

Array speaker system.

This line array speaker incorporates two 12" LF transducers and two premium-grade 2" HF transducers. This dual-transducer induced line array speaker effectively delivers 1100W of power. The high-quality and durable enclosure design has been tuned and optimized to deliver an incredible

tonal response.

Studiomaster Professional was able to leverage its long-standing experience in pro-audio design while developing this world-class line array systems. The Fire 92 Line Array system's specially design Constant Curvature waveguide offers unprecedented array coherence. An important aspect of a good line array system is the control over the splay angle. The variable splay angles are divided in to 4 configurations, 0°, 3°, 6° and 9°. Studiomaster Professional has designed it to be simple and intuitive for the end-user. The high-quality built-in passive crossover has been developed sourcing the best components for optimal performance. The textured anti-scratch paint finish ensures that the speakers stay protected during transit. With its exceptional sound quality, powerful response and long throw, the Fire 92 rivals the best brands in its segment. A great product backed with reliable after-sales support and cost-effective pricing, the Fire 92 Line Array system is set to cater to plethora of applications ranging from professional touring and install.

TWF 2115:

Studiomaster Professional has aggressively expanded its offerings in the high power transducer section in the last few years and the Indian pro-audio brand has now added a new member to its Titan series of transducers; the monstrous TWF 2115.

The TWF 2115 is a premium quality 21" 1500W (RMS) low frequency transducer from Studiomaster Professional. The speaker incorporates of a premium-grade 5" inside/outside wound copper voice coil. The low frequency sub-woofer speaker has a superb frequency response 33-2000Hz, ensuring powerful reproduction of sub frequencies. The TWF 2115 has a rated impedance of 8 ohms and a sensitivity of a whopping 98 dB. The sub-woofer speaker incorporates a powerful ferrite magnet and a durable aluminium die-cast basket.

The TWF 2115 is designed to be versatile and suits a host of enclosure designs. With an exceptionally high output, extended low frequency range, and high sensitivity, the TWF 2115 is powerful and surprisingly economical. The TWF 2115 is ideal for hirers and rental companies that require high bass handling capabilities.

DEV ELECTRONICS PLANS A DIGITAL WAVE FOR PALM EXPO 2016

Visitors looking to experience the best in pro audio technology, all at one single booth, can keep the focus locked on to **Booth No. A 41 and A 35, Hall 1**.

Dev Electronics, a name to reckon with in the Indian pro audio market, and Sole Distributors in India of world-class power house brands **PowerX** and **Wharfedale**; Authorized Regional Distributors for market leader brands like Pioneer DJ, Yamaha, Harman Group (JBL, DBX, Soundcraft, Crown, Lexicon, AKG, BSS), Narain Group (NX-Audio, Proton, Phonic, Satan Pro Lighting, Wegner Lasers, Raytech), QSC, and Studiomaster; and Prime Dealers for industry favorite brands like Shure, Sennheiser Group, Behringer Group, Denon, Allen&Heath, P.Audio, Dynatech, Mackie, Bose, LBT Lighting etc. and a host of other leading options are all set to make an enduring impression on visitors and industry peers alike at the PALM Expo 2016, with the absolute latest in tech-

nology, innovation and products that the above brands have to offer.

Staying a step ahead of the market trends, Dev Electronics, which has today come to be recognized as an unmatched comprehensive technology solutions provider for all things pro audio, will treat visitors to an unparalleled 'Digital' experience, at the company's booth **(Booth No. A 41)** by hosting a vast spectrum of digital pro audio products and technologies, that span every application imaginable – be it live, DJ, club, install, and/or music production. Customers can experience these products live in action and assess their buying decisions on an experiential basis.

With a booth space area that spans over **100 sq.mt.**, the Dev Electronics, booth will host an incomparable range of world class power amplifiers, loudspeakers and individual electronics and components like drivers etc. from the robust brand **PowerX**, in addition to **Wharfedale** Professional's compre-

hensive range of loudspeakers (active and passive); with products from both brands spanning live, touring, DJ and install application segments.

First up, the booth will feature **PowerX's** most competent, efficient and successful range of power amplifiers in the form of the D-Line series of high quality and high performance Class-H amplifiers, meant for rigorous touring and live sound applications where quality performance and dependability are of the utmost importance. That apart, PowerX will also promote some of their most successful speaker components, with supremely efficient drivers like the 15N500, 12N400 and 12N600 (all of which have witnessed great response across the country for its use in custom designed line array speaker systems), going live on prominent display. But the prime attraction among the PowerX component offerings at the PALM Expo 2016 will undoubtedly be the BMD755 which sports a 2"

throat with a 3" voice coil that delivers big performance in a truly value for money package, thereby making it one of India's favorite drivers for a variety of speaker systems.

Coherently, **Wharfedale Pro** will also be present at the Dev Electronics, Booth in all its grandeur, as the brand will prominently emphasize some of their most successful product lines, with the spotlight being thrown upon the Delta series of passive loudspeakers that are not just massive on performance but are also extremely durable and road-ready, making it a premier choice for mass-scale sound rental companies across the country. That apart, Wharfedale Pro's most successful loudspeaker range i.e. the EVP-X series is back in an all new, improved and refined avatar known as the EVP-X mkII which comprises the 12" and 15" models respectively of loudspeakers and on-stage monitor wedges.
