

## SOI 7 IN GURGAON ADORNED WITH IMPRESSIVE TECHNICAL SETUP

**Gurgaon:** The MNC Hub, Gurgaon's very own DLF Cyber city has opened up to a new 4000sqft venue known as the SOi 7. The SOi 7 is just what connoisseurs of pan-Asian cuisine have been looking for and is all set to entice lovers of food with something authentic and full of Far Eastern flavours.

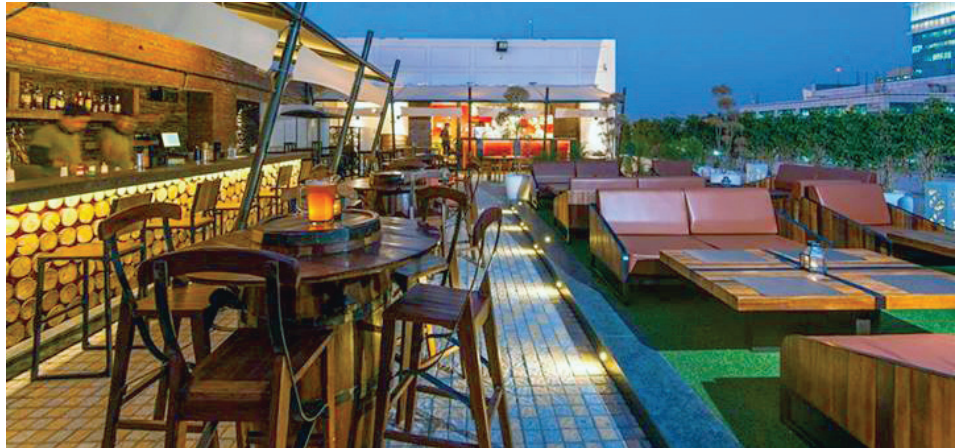

It's not the average Asian themed restaurant serving a fusion of various Asian cuisines. SOi 7 has compiled some of the essential components of the Asian kitchen, and its meals promise to be full of exotic flavors, combining exciting and scrumptious aromas and textures. And, its appeal goes far beyond food. It has the only microbrewery at the DLF Cyber Hub, along with an outdoor terrace, a dedicated live performance stage for bands and one of a kind attraction with a Muay Thai boxing ring.

This South East Asia themed restaurant and lounge is the brainchild of the owner of the much famous Micro Brewery Striker. The place has just opened up and is already doing wonders with its news spreading like wild fire.

Since the restaurant has a live performance stage, having a comprehensive pro audio setup was a necessity. This is where Harness Overseas, an AVL design and distribution company in Chandigarh stepped in with the AVL design and supply of equipment for the venue. Their partners in Delhi, Avian Tech, handled the entire commissioning and integration of the project.

The highly skilled team at Harness Overseas decided to use OHM for the audio due to its amazing performance and clarity. The installation consists of a wide range of products, with each section of the venue featuring a distinct setup, catering to its specific needs.

Saturn, the high performance range by

**The outdoor terrace area of SOi 7 sporting OHM speakers**

OHM has been installed at the venue. The Line array system used is the Ersä Minor, which has been combined with the BR7 and the TRS 118. While, the live performance stage is equipped with the TRS 112 Stage monitors, these stage monitors are full range enclosures or are incorporated into two-way systems as mid-high packs in a sub/sat system. Multi-tasking has been made complete by the built in flying points and aluminium top hat, totally compatible with the OHM hardware range.

"OHM has optimised the component characteristics of Saturn, which produces a finely tuned system providing linear, bright, clear and efficient output down to 48 Hz and an average SPL of 136dB. Saturn is a fast 3-way loudspeaker system with proprietary 15" long stroke 4" coil bass low-mid driver. An integrated passive crossover connected to a 2" plus 1" neodymium coaxial compression mid-high driver mounted on a rotatable 60° x 40V CD horn provides exceptional full bandwidth performance" says a representative from the integration team. "The subwoofer

used with this is the BR 218, which uses the Zero Acoustic Technology, preventing any unwanted periodic resonances which can occur. This virtually vibration free enclosure houses two high performance 18", 4" voice coil, drivers in optimally tuned coupled air volumes, resulting in massively accurate bass detail, unparalleled dynamics and a 135dB maximum SPL."

The feedback from the customers regarding the audio clearly affirm that a good job has been done in the designing the aural setup of the venue. The wiring of the whole AVL setup is so clean and intricate that it seamlessly blends at the venue without spoiling the aesthetic credibility of the interiors. The owners are also thrilled and ecstatic about their new venue. "Harness and Avian Tech have done a brilliant job. We are very pleased with the whole audio setup created. The feedback from our customers has been very encouraging. Everyone has enjoyed the sound. Even the after sale services provided has been superb. We are extremely pleased with the entire audio integration."

## STUDIOMASTER PROFESSIONAL PRESENTS THE POWERFUL PA 6.0 & PA 4.5

**Studiomaster** Professional recently made two additions to the legendary PA Series with the PA 6.0 & 4.5 stereo amplifier.

The PA 6.0 is a high power amplifier employing the highly efficient, high current Toroidal transformer, ensuring excellent transient response & low noise operation even at 2 ohms. Built with a high endurance amplifier module having low-noise variable speed fans & a large heat sink to ensure better sonic performance even in extreme stress conditions. It comes with three switchable operational modes - Stereo, Bridge

& Mono. At bridged 4 ohms, the PA 6.0 delivers a powerful 6000W RMS power output. The amplifier also offers multiple protections & operational features which make the same extremely flexible for a wide range of applications.

It has a switchable Limiter switch to protect the speaker from damage due to distorted input signals & guarantees tight low-end performance. The PA 6.0 runs stable even on low supply voltages & uses both power supplies; Switch mode power supply to work on voltages as low as 130V & at the

same time, Linear power supply to give a punch packed performance. It is decked with 32-detent rotary volume knobs along with mute, signal, clip & fault LED indicators for ease of operation & performance monitoring. Neutrik Speakon connectors provide easy yet trip proof output connections.

The PA 4.5 has the same features as that of the PA 6.0 with the only difference that at bridged 4 ohms, the PA 4.5 delivers 4500W RMS output.
